

Oz Studios

Internal Knowledge Base for RAG Chatbot Prototyping

Fictional sample document generated for retrieval testing, prompt grounding, and demo conversations.

Version 2026.04 | Internal Use Only | Some details below are intentionally dummy placeholders.

Purpose: This document is designed to behave like an internal wiki that a RAG chatbot can index and answer questions from.

Scope: Studio profile, team structure, services, SOPs, tooling, security, content standards, client workflow, and FAQ.

Note: This is a synthetic draft. Replace names, policies, emails, SLAs, and metrics with real values before production use.

Studio Type	Branding, design, web, and creative production studio
Primary Use Case	Knowledge base seed document for an internal/demo RAG assistant
Last Updated	11 April 2026

1. Company Introduction & Vision

Oz Studios is a fictionalized creative design and digital production studio used in this document as a realistic internal knowledge source for a RAG chatbot. The studio focuses on branding systems, social media creatives, motion graphics, website design, pitch decks, campaign visuals, and lightweight web implementation.

Vision Statement:

To help businesses look clear, credible, and unforgettable across every digital touchpoint.

Mission:

- Build visually strong brands with practical business thinking.
- Deliver fast, reliable creative execution for startups, agencies, and local businesses.
- Create reusable internal systems that improve design quality, speed, and consistency.

Core Values:

- Clarity over clutter
 - Craft with speed
 - Honest communication
 - Iteration over ego
 - Systems over chaos

Illustrative Studio Snapshot:

Oz Studios serves a mix of startup founders, e-commerce brands, coaches, and local service businesses. The team maintains reusable templates, brand kits, and campaign workflows so recurring client work can be produced efficiently.

2. Organization Structure & Teams

Leadership (dummy):

- Founder & Creative Director: Ozair Ahmad
 - Operations Lead: Sana Rauf
 - Design Lead: Hammad Ali
 - Motion Lead: Areeba Noor
 - Web & Automation Lead: Danish Karim
 - Client Success Manager: Hiba Tariq

Departments:

- Brand Design: logos, visual identity, guidelines, collateral
 - Social Creative: posts, ads, stories, campaign graphics
 - Motion & Video: reels, explainers, promo edits, animated assets
 - Web & Product: landing pages, UI kits, CMS updates, low-code builds
 - Operations & Support: intake, proposals, invoicing, handover, QA

Reporting Structure:

Designers report to the Design Lead, while project coordinators and support staff report to Operations. Cross-functional pods may be created for larger retainers or launch campaigns.

Internal Communication:

Primary tools are Slack, Notion, Google Drive, Figma, ClickUp, and company email. WhatsApp is used only for urgent client communication approved by the account owner.

3. Employment & Working Model

Oz Studios operates on a hybrid freelance-first model. Team composition may include full-time staff, part-time specialists, and retained contractors depending on workload.

Guidelines:

- Standard work window: 10:00 AM to 6:30 PM PKT, Monday to Friday
 - Core overlap required for collaboration: 12:00 PM to 4:00 PM PKT
 - Daily updates posted in Slack or ClickUp before end of day
 - Attendance is based on deliverables, meetings, and communication responsiveness

Probation & Evaluation:

New hires and long-term contractors may complete a 60- to 90-day evaluation period. Reviews consider design quality, turnaround time, revision handling, reliability, documentation quality, and client-facing professionalism.

4. Leave & Availability Policy

Illustrative leave policy:

- Casual leave: 12 days annually
 - Sick leave: 8 days annually
 - Emergency leave: case by case
 - Public holidays: studio calendar announced quarterly

All planned leave should be entered in the team calendar at least 3 business days in advance.

During launch weeks, campaign deadlines, or handover windows, backup ownership must be assigned before leave is approved.

5. Remote Work Guidelines

Remote work is the default operating mode for most contributors.

Requirements:

- Stable internet and backup mobile data
 - Functional headset and camera for client or internal review calls
 - Quiet workspace during presentations and review sessions
 - Files stored in approved shared folders, never only on personal devices

All contributors must update task status before logging off and document blockers clearly so work can be resumed without confusion.

6. Code of Conduct

Oz Studios expects professional, respectful, and solution-focused behavior.

Standards:

- Treat teammates, vendors, and clients with respect
 - Avoid blame language in reviews or postmortems
 - Use constructive design feedback with clear rationale
 - Do not insult client taste; translate feedback into actionable design decisions
 - Harassment, abuse, discrimination, or confidentiality breaches may result in immediate removal from projects

7. Information Security Policy

Because the studio handles client assets, source files, and occasionally ad account access, basic security hygiene is mandatory.

Requirements:

- Use strong unique passwords with a password manager
 - Enable 2FA on email, cloud storage, ad accounts, and design tools
 - Do not share credentials in plain text chat
 - Restrict access to folders by project need
 - Report any suspected breach, device theft, or accidental sharing immediately

Sensitive client materials include unpublished campaigns, investor decks, strategy documents, source code, paid media dashboards, and editable brand files.

8. Service Catalog

Oz Studios commonly offers the following services:

- Brand identity design
 - Social media post design and ad creatives
 - Motion graphics and short-form promotional videos
 - Landing page design and front-end implementation

- Presentation and pitch deck design
- Packaging mockups and digital collateral
- Monthly retainer support for content production

Every project proposal must define scope, deliverables, number of concepts, revision rounds, timeline, and output formats.

9. Client Onboarding Workflow

Standard onboarding sequence:

1. Lead capture or referral
2. Discovery call or written brief review
3. Proposal and quotation
4. Deposit confirmation
5. Shared folder + task board setup
6. Moodboard / references collection
7. Production kickoff
8. Review rounds
9. Final delivery and archive

Mandatory onboarding artifacts:

- Client brief
 - Approved quote
 - Billing record
 - Brand references or existing assets
 - Primary contact details
 - Delivery checklist

10. Design Production Lifecycle

Typical creative workflow:

1. Brief intake and objective clarification
2. Reference research and visual direction
3. First concept development
4. Internal QA before client presentation
5. Client review and feedback consolidation
6. Revision rounds
7. Final approval
8. Export packaging and handoff
9. Archive source files and update project notes

Internal QA should check alignment, consistency, spelling, brand color use, export settings, file naming, and dimension accuracy.

11. File Naming & Asset Management

File hygiene is critical for retrieval and handover.

Naming convention example:

[client]-[project]-[asset-type]-v01.ext

Rules:

- Never use final-final-v2 naming
 - Keep editable files in structured folders
 - Separate source, exports, references, and licensed assets
 - Archive superseded drafts instead of mixing them into active folders
 - Include date or version when files are externally shared

12. Brand Guidelines Handling

When a client has an existing brand system, that system overrides stylistic preferences unless the project specifically includes rebranding.

Minimum brand kit items to request:

- Logo files in vector or transparent PNG
 - Color palette with hex/RGB/CMYK when available
 - Fonts or approved alternatives
 - Tone and positioning notes
 - Past marketing samples

If no guideline exists, the team should create a lightweight usage note during the project so future work remains consistent.

13. Quality Assurance Checklist

Before any delivery, confirm:

- Text is proofread
 - Canvas size is correct
 - Safe zones and bleed are correct where relevant
 - Color profile/export setting is appropriate
 - Linked assets are present
 - Naming is clean and client-facing

- Source files are organized
- Mockups are clearly labeled as mockups, not live screenshots

High-risk deliverables such as print materials, website launch files, or paid ad creatives require a second-person review.

14. Revision & Feedback Policy

Feedback must be consolidated into a single message or document whenever possible. Fragmented feedback across voice notes, chat threads, and screenshots leads to avoidable errors.

Internal rule:

- Minor revisions stay within scope
 - Direction changes after approval may require re-quote
 - Unlimited revisions are not offered unless explicitly written into the agreement
 - Revision requests should reference the latest approved version

15. Pricing & Proposal Logic

This section is illustrative and can be used by the chatbot to answer fictional pricing questions.

Pricing principles:

- Quote by value and scope, not just hours
 - Charge separately for rush delivery, extra concepts, heavy copywriting, and source file transfers when appropriate
 - Require deposit before production begins
 - Retainers should define monthly design volume, response time, and rollover rules

Dummy example ranges:

- Logo starter package: USD 150 - USD 400
 - Social post bundle: USD 80 - USD 250
 - Landing page design: USD 300 - USD 900
 - Motion promo reel: USD 120 - USD 500

16. Client Communication Standards

Response expectations:

- Acknowledge client messages within 1 business day
 - Flag blockers early
 - Avoid technical jargon when a simpler explanation works
 - Confirm scope changes in writing
 - Summarize meetings in bullet form after calls

Preferred channels are email for approvals, Slack for retained clients, and WhatsApp only for urgent operational issues.

17. Tool Stack & Integrations

Illustrative tools used by Oz Studios:

- Figma for UI, social creatives, and collaborative design
 - Adobe Photoshop and Illustrator for production work
 - After Effects / Premiere Pro for motion work
 - Notion for documentation and SOPs
 - ClickUp for task tracking
 - Google Drive for shared storage
 - Slack for internal communication
 - Framer / Webflow / basic React stack for lightweight builds

Any new tool that stores client data should be approved by Operations before adoption.

18. RAG Chatbot Knowledge Rules

This section is intentionally included for chatbot retrieval testing.

The OzBot assistant may answer questions from approved internal documents, proposal templates, FAQs, SOPs, and project archives. It must not fabricate signed contracts, payment confirmations, or client approvals.

Grounding rules:

- Prefer the most recent approved document
 - If information conflicts, surface uncertainty
 - Never expose private client data unless the user is authorized
 - Mark dummy or placeholder content as illustrative when relevant
 - Escalate legal, payment dispute, and account access questions to a human owner

19. Prompting & Retrieval Best Practices

Recommended chunks for indexing:

- Company overview
 - Services
 - Workflow steps
 - Revision policy
 - Pricing logic
 - Security rules

- Tool stack
- FAQ

Best practices:

- Chunk by heading and subsection
 - Preserve section numbers for citation-friendly answers
 - Include synonyms such as proposal/quote, reel/video, brand kit/guideline, social post/creative, landing page/web design

Suggested metadata fields:

department, owner, version, effective_date, audience, confidentiality, document_type

20. Sample FAQ for Assistant Testing

Q: What services does Oz Studios provide?

A: Branding, social design, motion graphics, landing pages, presentations, and related digital creative production.

Q: How many revision rounds are included?

A: By default, proposals should specify revision rounds clearly; minor revisions are included but direction changes may require re-quote.

Q: What is needed before kickoff?

A: Approved quote, deposit, project brief, client references, and a working communication channel.

Q: Can the chatbot confirm a payment?

A: No. Payment status should be validated by a human through finance records or payment gateway data.

21. Incident & Escalation Policy

Incidents include missed deadlines, corrupted source files, accidental client-facing errors, security issues, and publication mistakes.

Severity examples:

- Low: minor typo caught before launch
 - Medium: late handoff causing internal delay
 - High: wrong creative published or sensitive file shared externally

Escalation path:

Project owner -> Operations lead -> Founder / account owner depending on severity

Critical incidents should be logged with date, cause, impact, fix, and prevention steps.

22. Invoicing & Payment Operations

Illustrative rules:

- Deposit required before production
 - Final files delivered after balance clearance unless otherwise agreed
 - Invoices issued with project name and due date
 - Rush work may require full advance payment
 - Refund decisions are case-specific and tied to work completed

The chatbot should not make binding payment promises; it may provide policy guidance only.

23. Onboarding & Offboarding for Team Members

Onboarding checklist:

- NDA or contractor agreement signed
 - Access to relevant folders and tools
 - Review of SOPs and file naming rules
 - Trial task or calibration task assigned
 - Introduction to team channels

Offboarding checklist:

- Remove access from storage, project boards, and communication tools
 - Collect project notes and editable files
 - Confirm invoice closure
 - Archive contribution history

24. Content Calendar & Campaign Delivery

For retained clients, work is often delivered through a monthly content system.

Monthly rhythm example:

Week 1: strategy and references

Week 2: draft creatives

Week 3: revisions and approvals

Week 4: scheduling support and reporting notes

Every content calendar must identify owner, deadline, platform, format, caption status, and asset status.

25. Appendix: Dummy Contacts & Channels

Internal contacts (illustrative only):

- ops@ozstudios.example
 - support@ozstudios.example
 - finance@ozstudios.example
 - security@ozstudios.example

Shared folders:

- /Drive/Oz-Studios/Clients
 - /Drive/Oz-Studios/Templates
 - /Drive/Oz-Studios/Brand-Kits
 - /Drive/Oz-Studios/Archive

End of document. Replace all dummy contacts and policy values before real deployment.
